

EHR INTEGRATION SERVICE

The REDCap Cloud EHR Integration Service empowers organizations to automate and standardize the intake, integration, and analysis of multiple sources of health data in a standards-based way to meet the ever-evolving regulatory-grade evidence requirements.

Benefits of using REDCap Cloud EHR Integration

Unified platform combines research and care processes to deliver real-world insights

Significant reduction in both cost and time associated with patient recruitment and source data verification

Faster electronic health record integration set up and data mapping through our Integration Accelerator

Decreased burden on site staff by eliminating the need for duplicate data entry

Supports new contracting models to ensure high quality real-world data input

Provides a unified view of data for research and commercial teams

Unique Capabilities of REDCap Cloud

- Provides the opportunity to convert EHR data into high quality operational and conceptual definitions on a single platform, meeting the highest regulatory-grade standards
- Manages both PHI (Protected Health Information) and non-PHI workflows allowing clinical trial sites to access data when interacting with patients
- Dedicated portal provides clinical trial sites with a single location to manage their EHR connector and accelerate the security review process

REDCap Cloud Unified Data Science Platform

THE INDUSTRY'S MOST FLEXIBLE DATA SCIENCE PLATFORM

REDCap Cloud technology empowers organizations to easily collect, integrate, standardize, analyze, and report on real world, regulatory-grade data for any use case. Our modern platform delivers a customizable suite of integrated applications to support development of life science breakthroughs from research to commercialization.
